

In EVERY file submitted (except graphics files) you MUST place the following information near the top of the page – use JavaScript or HTML comments depending on the file type. JavaScript comments are // (single line) or /* */ (multi-line) HTML comments use <!-- This is a comment. --> CSS files use only multi-line /* */ comments.

Your Full Name
CIS 114 OL
File Name
Chapter #
Assignment #
Date

Your full name must ALSO appear in the title bar when HTML files are displayed in the browser. Use the <title> element in the document head to do this. 1 point will be deducted for each file missing any of the above information.

Create a folder named assign4.

1. In chapter 9 work through the chapter and do the Pursue bulleted list items 8, 9, 14 and 15 on pages 373-374 (end of chapter 9). Be sure to comment out any code that you must modify before making changes. Also, place a comment whenever modifying/adding code. Create a folder named chapter9 and place all files in it. Maintain separate folders for the js and css files. Place the chapter9 folder in the assign4 folder.

Note: on page 368 step 11 the call to setThemeCookie(theme) will only work correctly if you check the value of the e parameter in the setThemeCookie function. If it is string then the call to COOKIE.setCookie would have different arguments than calling it if e is an event. You can use an if/else statement.

On page 356 there is an error in the section named Referencing Style Sheets:

```
var mainCSS = document.getElementById('mainStyleSheet');
```

This should be:

```
var mainCSS = document.styleSheets[0];
```

2. In chapter 10 work through the chapter and do the Pursue bulleted list items 2, 3, 5, 6 and 13 on pages 422-423 (end of chapter 10). Be sure to comment out any code that you must modify before making the changes. Also, place a comment when modifying/adding code. Create a folder named chapter10 and place all files in it. Maintain separate folders for the js and css files. Place the chapter10 folder in the assign4 folder.

Note that in os.js if a menu is disabled you can set the visibility property to hidden.

3. Use the original chapter 10 register.html file and rename it register2.html. You will add a password, address, credit card type, credit card number, and expiration date. Use the chapter 10 register.js file and rename it register2.js. Create a folder named register2 and place all files in it. Maintain separate folders for the js and css files. Place the register2 folder in the assign4 folder.

Make these changes in register2.html:

- a. Move the email field to the top of the form and create and place the password field directly under it. Add a tooltip for the password to display “Minimum six characters, including at least one digit and one letter.”
- b. Create an address input field and place it above the city field.
- c. At the bottom of the form, add a selection element for the credit card type: Visa or MasterCard.
- d. Add an input field for the credit card number. Add a tooltip to display “In the format XXXX XXXX XXXX XXXX or XXXX-XXXX-XXXX-XXXX or XXXXXXXXXXXXXXXX.”
- e. Add an input field for the expiration date. Add a tooltip to display “In the format MM/YYYY.”

Make these changes in register2.js:

- a. Validate the password with a regular expression. The password must have at least 6 characters and must contain at least one digit and one letter (upper- or lowercase). You can get some help with the regular expression here (see #3): <http://www.the-art-of-web.com/javascript/validate-password/>
- b. Add validation for the last name, address and city fields (similar to first name).
- c. Validate the credit card number with a regular expression. The credit card number must have 16 digits and can have a space or hyphen between groups of 4 digits, or can contain no spaces or hyphens. (For anyone wanting more of a challenge, you could research the numbering conventions used by Visa and MasterCard. Also, you could add more credit cards and validation for them.)
- d. Validate the expiration date with a regular expression. The expiration date must be in the format MM/YYYY. In addition, the expiration date must be in the future from the time that the form was submitted (use the Date class).
- e. Be sure to enable the tool tips for the new input text fields (except address).
- f. Test to be sure that error messages are shown if there is any invalid or missing input.

No changes are necessary in newform.css, unless you want to improve upon the design. No changes are necessary in utilities.js or errorMessages.js.

Expiration Date

04

Please enter the expiration date.

SUBMIT: Place the chapter9, chapter10, and register2 folders in the assign4 folder. Then zip the assign4 folder into a single file named assign4.zip and upload it to WebAccess. Make sure that you include ALL FILES. You should try unzipping your zip file to ensure that all files were correctly included.

An easy way to zip in Windows is to right-click on your file and then choose Send To-> Compressed (zipped) Folder

On a Mac follow these instructions to zip your files:

<http://www.macinstruct.com/node/159>

Upload the assign4.zip file to the upload link in WebAccess by the due date/time.

<http://smccd.mrooms.net>
